	Infix to prefix algorithm			
	27 April 2023 11:58	Infix expression:	Current element :	Stack :
	start scanning from right to left If(current element is an operand)	5*3/2*6/4+7-3+8/2		
۷)	Append it to the prefix expression	3 3/2 3/11/313/2		
	Else			
	// If(current element is an operator) While(stack is not empty && priority of topmost element > priority of		Prefix Expression: 28/3746235*/*/+-+	
	current element)		28/3/40233*/*/+-+	
	{			
	Pop element from the stack and append it to prefix expression }		Reverse: +-+/*/*5326473/82	
	Push current element onto the stack.		1 17 7 3320473702	
31	Repeat the above steps till end of infix expression			
4)	Pop all the remaining elements from the stack one by one and append them			
-1	to prefix expression			
5)	Reverse the prefix expression			
	The state of the s
